

# High Performance IFV & MDV Mounts Engine Stability+

The adjustable mount with outstanding thrust capacity and vibration reduction for V-drive, down angle and standard marine engine installations.

Designed to directly refit most OEM mounts.

[www.isoflextech.com](http://www.isoflextech.com)

## Improved Thrust Control

Incorporates a more stable vertical lift control to minimize the effect of thrust lifting the engines.

## Easier Installation

A narrower footprint and rotating base inserts make installation easier and more flexible.

## Configuration Options

Isoflex IFV and MDV mounts are modular, which means they can be configured and rebuilt easily.

## WE ARE SERIOUS ABOUT VIBRATION CONTROL

The IFV and MDV mount series is designed to meet the requirements of today's lighter, higher horsepower marine engines, especially with V-drive and down angle gearboxes. With the same vertical stiffness up and down, IFV and MDV mounts offer even greater engine stability, which means even better vibration isolation.

# Maximize engine stability. Minimize vibration.

## Isoflex IFV & MDV Series

Also available in bolt-down options

- Thrust capacity increased up to 40%
- New builds, retrofits & replacements
- Load per mount: 100-2000 kg / 220-4400 lb
- Performs similar to a trunnion mount
- DNV Type Certified
